Fusion AI Product Management

Safe harbor statement

The following is intended to outline our general product direction. It is intended for information purposes only, and may not be incorporated into any contract. It is not a commitment to deliver any material, code, or functionality, and should not be relied upon in making purchasing decisions. The development, release, timing, and pricing of any features or functionality described for Oracle's products may change and remains at the sole discretion of Oracle Corporation.

Agent Team Design & Architecture

Agent Teams are best for tasks that are complex, modular or require parallel processing.

Supervisor / Orchestrator	A supervisor agent coordinates and decides which worker(agent) to call to perform a specific task.
Agent / Worker	Agents are assigned specific sub-tasks; agents can run concurrently and use tools to perform tasks
When to Use	A use case requires distinct roles or personas, each of which require distinct tools to accomplish a task.
Agent Team Best Practices	• 3-5 Agents per Agent Team • 1-5 tools per Agent

Agent Design & Architecture

Agent Teams

Single Agent

When to use - Use a single agent if one role/ persona can handle the task entirely.

Ideally, an agent should handle 1 to 5 tools for optimal performance, but no more than 10. Connection of >5 tools assume they are closely related

Multi-Agents (Supervisor/Orchestrator)

When to use - Use multiple agents if the workflow involves distinct personas, each requiring specific tools or logic, e.g., reasoning, math, function calling.

Aim for 3 - 5 agents per workflow. If more than 5 are needed, split into separate workflows to maintain clarity and simplicity.

When to use Single vs Multi-Agent Teams

Single Agent

Best for: Simple, self-contained tasks with clear objectives and minimal dependencies

Advantages:

- **Simplicity:** Easier to design, maintain, and control.
- **Speed:** No need for coordination, so task execution is typically faster.
- **Resource Efficiency:** Fewer resources needed since only one agent operates.

Limitations:

- **Scalability:** Harder to manage large, complex, or multi-step problems efficiently.
- **Expertise Boundaries:** A single agent may lack specialized skills for every part of a complex task.

Multi-Agents (Supervisor/Orchestrator)

Best for: Tasks that are complex, modular, or require domain specialization and parallel processing.

Advantages:

- **Specialization:** Assign agents with distinct expertise or skills for subtasks (e.g., research, data analysis, reporting).
- **Parallelization:** Multiple agents can run subtasks concurrently, reducing overall completion time for multi-faceted workflows.
- **Modularity:** Easier to add, change, or replace agents as requirements evolve—supports flexible workflow design.
- **Scalability:** Handles larger, more complex projects that one agent can't feasibly manage alone.

Agent Design & Architecture

Multi-Agent Configuration

Organizing your agents and assigning appropriate tools to worker agents is crucial for creating efficient, maintainable Agentic workflows.

Agent Partitioning

- Domain-based: Divide worker agents based on business domains. E.g, Recruit, Talent, Learning, etc.
- Function-based: Divide worker agents for specific functions and task. E.g., payslip related, personal information related, skills related, etc.

Each agent should be specialized in a specific area of the product or service. Having agents with dedicated expertise can lead to higher accuracy in their responses and actions

Multi-Agent Configuration

Why Descriptions Matter

Clear and consistent descriptions are essential, provide critical context, guide orchestration, and inform prompt construction.

Supervisor Agent Descriptions

Should define the agent's orchestration role, including how it routes requests, manages context, and handles multi-topic conversations. Use consistent phrasing like:

"You are an intelligent orchestration agent that analyzes employee inquiries, determines their primary intent, and routes conversations to specialized worker agents handling payroll, career development, organizational information, and benefits.."

Worker Agent Descriptions

Should be concise and specific. Clearly state the agent's function, inputs, and output expectations. Include scope boundaries and use a standard format.

"A specialized payroll assistant that helps employees retrieve, interpret, and analyze their payslip information, including payment details, deductions, and tax withholdings, while maintaining strict data privacy and avoiding financial advice or direct system modifications.."

Tool Descriptions

Are inserted directly into prompt templates—accuracy is critical. They should:

- Be precise about the tool's purpose and outputs
- Mention dependencies and prerequisites
- Specify resource type, operation, and common use cases
- Describe the structure of the response content

Retrieves a worker's email, username, and display name using person ID

System Prompts and Topics

Walkthrough

System Prompts vs Topics

	System Prompt	Topic
What is it?	An instruction, rule set or guiding context that defines the agent behavior, identity, constraints or operational boundaries	The subject matter, theme or content area under discussion or being worked on by the user and/or agents.
Purpose	Defines how the AI responds and what policies, rules or personality it should follow throughout the workflow and tasks.	Tells the agent what to talk about or work on.
Example	"You are a helpful customer support agent. Always greet the customer, use polite language and never share confidential information."	"Explain Oracle Cloud pricing to a new customer"

System Prompts -Tips & Tricks

	Good	Bad
Be concise but specific about the role	An advisor that helps employees retrieve and interpret information about pay slips issued to them	This agent helps with HR tasks
Define the abilities of the workflow	Assists employees in understanding job requirements and matching their skills to internal opportunities	Uses getJobDetails API to show job information
Include boundaries	Provides guidance on available benefits plans and enrollment options (excluding financial advice)	Benefits helper agent

Topics - Tips & Tricks

Topics provide detailed instructions for handling specific conversation scenarios.

When a Topic spans multiple steps (e.g., verifying user, retrieving payslip, comparing past salaries), ensure strict ordering and validations between steps.

Example: Force authentication validation to succeed before proceeding to next topic or tool invocation.

1. *Authenticate user. (If step 1 fails, do not proceed to steps 2 or 3)*
2. *Fetch WorkerId.*
3. *Retrieve Payslips*

Functional Topics	Non-functional Topics
• Function-wise: One topic for payslip retrieval, another for tax calculations, another for multiple payslips • Sequential: If sequence is required, provide those instructions in strict language • Tool usage: Tools are mentioned in the tool description. While describing how to do a task, mention tools • Provide examples for each topic	• Manage greetings • Out of context queries • Output formatting (concise or detail) • What is the user's persona (chat interface, or is it for CSRs, realtime or batch, etc.)

Good vs. Bad Prompt Writing

Good Prompt Writing

- **Be Explicit & Specific**
 - Define each agent's role
 - Clarify tasks and goals
- **Anticipate Dependencies**
 - Define pre-requisites
- **Provide Context**
 - Share background information
 - Document assumptions
- **Provide Clear Error Handling Instructions**
- **Use Modular, Reusable Prompts**
 - Break down tasks into manageable sub-prompts

Common Mistakes

- **Ambiguity**
 - Not clarifying agent roles, tasks or expected outputs
- **Overloading Prompts**
 - Entering too much information, leading to confusion
- **Ignoring Dependencies**
- **No Error Handling guidance**
- **Inconsistent Instructions**
- **Assuming Tacit Knowledge**

Solving Prompt Mistakes

	Outcome	Solution
Being too vague ("Help users with HR tasks.")	Model confuses role and gives inconsistent answers	Provide good structure and reasoning to your prompt with clear segmentation and definitions. Treat your prompt like a legal document: define all your terms. If it looks confusing to you, it will look confusing to the LLM.
No output formatting	Users get messy, hard-to-read replies	Define the personality, style, and formatting of the response you want. E.g. "In the style of a customer service agent..."
Not setting boundaries	Agent may hallucinate abilities or answer incorrectly	Provide the exact domain for the Agent, and restrict it to that domain. You may instruct it to ignore off-topic questions.
Overloading with too many details	Model gets confused or performance degrades	If you find yourself packing your prompt with dozens of edge cases, consider breaking down the task into more steps (multi-agent)

Supervisor vs Worker Agent Prompt

Supervisor Agent Prompt

Supervisor Agents oversee, coordinate, manage or evaluate the workflow of other agents. Supervisor prompts focus on decision-making, assignment distribution, monitoring and quality control.

Typical Prompt Elements:

- Assigning tasks to worker agents
- Aggregating or validating outputs from agents
- Handling exceptions or escalations
- Providing feedback or further instructions based on intermediate results
- Ensuring workflow continuity

Worker Agent Prompt

Worker Agents execute specific domains of work, as directed by the supervisor or directly from detailed user or task instructions. Worker Agent Prompts focus on clear, actionable direction to perform a discrete task.

Typical Prompt Elements:

- Focusing on a single, well-defined assignment
- Reporting status or results to supervisor agent
- Following guidelines or templates for output
- Seeking help or supervisor feedback if blocked

Summarization Prompt

Summarization prompts are instructions or requests given to an LLM or Agent directing it to condense information – such as a document, conversation or dataset – into a shorter and more digestible form, capturing only the most important points, facts or themes.

Key Features of a Summarization Prompt:

- **Objective:** Guide the agent to generate a concise version of longer content
- **Clarity:** Specify the desired length, style or level of detail (e.g "in 3 sentences" or "as bullet points")
- **Context:** Include details about the audience or purpose of the summarized content. (e.g. "for an executive briefing")

Example Summarization Prompts:

- "Summarize the main points of this email thread in 2-3 sentences"
- "Provide a bulleted summary of the attached meeting notes, focusing on key decisions and action items"
- "Write a brief overview of this research article for a non-technical audience"

How to Create and Use Topics

- Navigate to the **Topics** tab at the bottom of the page.
- Click the " + Add " button to open the "New Topic" configuration screen.
- **Define Basic Topic Information:**
- Enter a unique **Topic Name** .
- Enter a unique **Code** .
- Select the appropriate **Family** and **Product** .
- Write a clear **Description** explaining the purpose or conversational domain of this topic.
- **Define Instructions.**
- **Save the Topic:** Click "Create" or "Save".
- **Repeat:** Repeat this process for every Topic (instruction set) your agent will need.

The screenshot shows the 'New Topic' configuration screen. At the top, there's a title bar with 'New Topic' and 'Cancel' and 'Create' buttons. The form contains several fields: 'Topic Name' and 'Topic Code' (both marked 'Required'), 'Family' and 'Product' (dropdown menus, both marked 'Required'), and a large 'Description' text area (marked 'Required'). Below these is an 'Instructions' section with a large text area for 'Instruction' and a trash icon. At the bottom of the form is a '+ Add Another' button. The bottom of the screen shows a navigation bar with icons and labels for 'AI Agent Studio', 'Agent Teams', 'Agents', 'Tools', 'Topics' (which is highlighted), 'Deep Link', and 'Business Object'.

How to Create and Use Topics: Instructions

Instructions is the core of the topic.

In the **Instructions** text area, write the step-by-step logic the agent should follow when this topic is invoked. This often involves specifying *when* to call certain *Tools*, and *what* to do with the results (e.g., converting them into JSON format)

Be precise and clear.

Example

*You are a helpful assistant that answers questions from sales representative about Opportunities using the instructions:
Use the provided tools to search for data about the Opportunities, and other information to assist the user's queries.
Do not outline the tool steps or plan; instead, suggest tools one at a time as per your plan.
Many queries may require using multiple tools to formulate a complete response. Support both single and multi-intent queries. Each intent may require multiple actions for a satisfactory response.
Limit responses strictly to account sales related topics, ensuring accurate and relevant information.
Never generate facts. All answers should rely on REST API response or account documents.
IMPORTANT: when you generate tool calls JSON, ensure producing valid JSON and don't miss any curly braces at the end.
When required to call multiple tools , call each tool sequentially and not do nested calls.
Say TERMINATE when you gave the final answer on user's query.*

Topics Expressions

Topic expressions are a way to refer to any particular topic of choice which is having a set of specific instructions for an agent. The topic can be referred inside the system prompt area of the associated agent in any desired manner.

You can refer to any topic which has been associated to an agent in the following syntax: \$topic.<topic code>

1. Create topic

2. Associate it with an Agent

3. Refer to it

or

Best Practices for Topic Writing

1. Be Specific

- Clearly state the subject or question.
- Avoid overly broad or vague references.

2. Be Concise

- Focus on the main idea without unnecessary detail.
- Aim for a single sentence or phrase when possible.

3. Use Neutral and Precise Language

- Avoid slang, jargon, or ambiguous terms.
- Use words that directly express the intended subject.

4. Align with the Audience or Task

- Consider who will be working on or reading the topic.
- Tailor the scope and wording accordingly.

5. Avoid Multi-Part or Compound Topics

- Stick to one subject per topic to promote clarity and better outcomes.

Good Topic

Best Practices for secure API integration.

Data retention policy for Europe

Monthly customer support satisfaction statistics

Bad Topic

API integration

Storing data

Customer happiness

Tool Configuration & Usage

Tool Configuration & Usage

Best Practices

Write Clear, Precise Tool Descriptions

Descriptions are injected into prompts—ensure they explain the tool’s purpose, required inputs, expected output, and any dependencies or limitations.

Use Human-in-the-Loop (HITL) Thoughtfully

For tasks involving judgment, compliance, or ambiguity, integrate HITL steps with clear labels and fallback behavior if the user does not respond.

Limit Exposed Fields in Business Object Tools

Only select the fields needed for the agent to complete its task. This reduces response size, improves performance, and avoids unnecessary token usage.

Validate Inputs and Handle Errors Gracefully

Ensure the agent knows which inputs are required and how to proceed when they’re missing or incorrect. Tools should return helpful error messages or null-safe outputs.

Maintain Tool-to-Tool and Topic-to-Tool Discipline

Sequence tools logically and define clear mappings between topics and tools.

Design for Performance and Responsiveness

Keep payloads light and avoid redundant API calls. Efficient tools lead to faster, more reliable agent responses.

What is a Business Object?

It's a Connector to Fusion Applications

- Business Objects are a specialized bridge.
- It connects your AI Agent to fusion applications, allowing the agent to understand and interact with the applications.

It creates a flow like this:

- AI Agent ↔ Business Object ↔ Fusion API

Examples of Business Objects: Opportunities, Service Requests, Payslips, Products

What Can It Do?

- Each object has a specific set of functions that define what the agent can do.
- The agent can only perform the functions you define.

Example: Service Request Object

- Get all service requests: Fetches a list of all open requests.
- Create a new service request: Creates a new support ticket.
- Find a request by SRNumber: Retrieves details for a single, specific request.
- Add a message to a service request: Updates a ticket with a new message.

Business Object

Defining Effective Business Objects

Business Object Description

- Clearly explain the object's purpose. Tell the agent when and when not to use it.

Example for 'Service Request'

Represents a formal, trackable request from a user for help, support, or a service.

When to Use:

This object is the primary tool for any situation where a user needs to:

Report an issue: e.g., 'My laptop is slow,' 'The printer on the 2nd floor is broken.'

Request something new: e.g., 'I need access to the sales database,' 'Request a new office chair.'

Ask a question that requires a formal response: e.g., 'What is the policy for requesting time off?'

Key Information:

A service request is primarily identified by its unique Service Request Number (e.g., SR-20250718). Key functions involve creating new service requests, checking the status of existing ones using the SrNumber, and adding messages to a service request.

Do not use for: General conversation or tasks that don't need to be formally tracked, like scheduling a meeting or sending a simple email.

Defining Effective Business Objects: Functions, Parameters & Fields

Business Object Function Description

- Describe the function's outcome with a clear action verb. What does this function achieve?

Example for 'create_serviceRequests':

Creates and submits a new service request ticket in the system.
Returns the details of the successfully created service request including the SRNumber.

Function Parameter Description (The Key to Validation)

- This is where you embed validation rules that your API lacks. The agent will read this and ask the user for correct information before calling the API.

Include these details:

- **Requirement:** Is it 'required' or 'optional'?
- **Format:** e.g., "Enter date as 'MM/DD/YYYY'."
- **Allowed Values:** e.g., "Must be one of: 'ValueA', 'ValueB'."
- **Constraints:** e.g., "Title must be at least '10 characters' long."
- **Default Value:** Default values for fields

Defining Effective Business Objects: Examples

Examples teach the agent how to map natural user language to the correct function and parameters. It's the most effective way to improve accuracy.

Example:

- Description: To Create a high priority service request with the title 'Cannot access shared drive'."
- Payload:

```
{  
  "Title": "Cannot access shared drive",  
  "SeverityCd": "ORA_SVC_SEV1",  
}
```

Export/Import Using FSM

Migrating components of your agentic flow from one instance to another

Export/Import Using FSM

FSM will be used to promote agentic workflows (agent teams) from one environment to another (e.g., Development to Test, Test to Prod, etc).

☑ **What is included:** Components (agents, tools, topics, prompts, etc) that form part of a workflow will be included

✗ **What is not included:**

- Stand-alone agents that are not part of any agent team or workflow
- Seeded objects such as preconfigured tools or default system components

🔗 **Note:** A key rule in the promotion process is that only **non-seeded** records are eligible for migration. Seeded data - typically system-provided or baseline configurations - is considered environment specific and will **not** be transferred to other environments.

Export/Import Using FSM

- Use **Manage AI Agents and its Components** task in your Implementation Project
- Supported filtering options are - Family, Product, and Agent team
- Additional steps may be required if the agent team has
 - A document tool, you will have to upload the document and publish it
 - A HCM email tool, you will have to reconfigure it to generate required alerts
 - An external REST tool, you will have to reconfigure authentication

Guardrails for Trustworthy Agents

Delivering Trustworthy Agents

Defense-in-depth through a combination of technical, contractual and policy guardrails

Testing, Evaluating, Optimizing Agent Quality

METRO Preview

Testing Agents is Different

- Outcomes are non-deterministic & open-ended
- Execution flows are not predetermined
- Quality problems can be hard to detect
- Agents are getting increasingly complex

Automated Testing

- Generate responses for the benchmark dataset
- Compute **Correctness of answers** as the primary testing metric
`answer_correctness(question, response, expectation) -> score`

Example – Evaluating Agent Responses

We get a near perfect score .95 (out of 1) for a correct answer.

How can I help you?

Who is manager for David Beckham

There is no record of an employee named David Beckham in the database, so I'm unable to provide information about his manager. If you have another name or need details about a different employee, feel free to ask!

Case	Expected Answer	Actual Answer	Score
S01-1	There is no record of an employee named David Beckham in the database, so I'm unable to provide information about his manager.	There is no record of an employee named David Beckham in the database, so I'm unable to provide information about his manager. If you have another name or need details about a different employee, feel free to ask!	.95

Example – Evaluating Agent Responses

We get a score of 0 for an incorrect answer.

So we can set a threshold of maybe 0.75 to make sure we get correct answers right?

Case	Expected Answer	Actual Answer	Score
S01-1	There is no record of an employee named David Beckham in the database, so I'm unable to provide information about his manager.	There is no record of an employee named David Beckham in the database, so I'm unable to provide information about his manager. If you have another name or need details about a different employee, feel free to ask!	.95
		David Beckham's manager is Klaus Beckenbauer. If you need any more information, feel free to ask!	0

Metrics, Evaluation, Tracing, Reporting, Observability (METRO)

Building Excellence & Trust in AI Agents

Our Vision for METRO

To empower teams to confidently build, deploy, and manage high-performing, accurate, reliable, and cost-effective AI Agent solutions through comprehensive tools, insights and robust governance.

METRO enables this by focusing on:

- **Deep Observability:** Providing granular visibility into every stage of AI development and operation from a single prompt execution to multi-agent interactions.
- **Proactive Quality & Safety:** Integrating evaluation and guardrails throughout the lifecycle to ensure AI behaves as intended and adheres to responsible AI practices.
- **Actionable Performance Insights:** Offering the tools to monitor, diagnose, and optimize AI for speed, efficiency, and resource utilization.
- **Informed Cost Management:** Delivering clarity on token usage and operational expenses to ensure AI initiatives are sustainable and deliver value.
- **Operational Confidence & Control:** Equipping developers and administrators with the data and controls needed to manage AI systems effectively and scale with trust.

METRO: 25D Capabilities

25D release delivers foundational capabilities across Evaluation, Metrics Reporting, and Tracing for managing and understanding your AI Agents.

Evaluation:

- Manage evaluation sets to test AI Agents
- Run evaluations using predefined questions & reference answers.
- Detailed & comparative run analysis and AI Agent evaluations.

Metrics Reporting & Observability:

- Agent Dashboard for AI Agent activity overview.
- Track Accuracy(Quality), Latency (Performance), Token Usage (Cost/Agent efficiency)

Tracing:

- Step-by-step AI Agent execution timeline (sequence, duration, status).
- View metadata: inputs, outputs, performance, quality (Evals) & cost metrics.
- View contextual data: Memory, prompt, instructions.

LLM as a Judge: Automating Correctness Evaluation

Leveraging Advanced AI to Assess AI Quality

To provide scalable and automated quality assessment, METRO incorporates "LLM as a Judge" (LLMaaJ) for evaluating the correctness of AI Agent responses.

How METRO Utilizes LLM as a Judge:

- Leveraging metrics evaluation prompts from industry standard benchmarks and platforms, such as Arize Phoenix, Deep Eval, Llama Index, etc.
- A specialized **evaluation prompt** is used to instruct the "Judge" LLM.
- Prompt guides the Judge LLM to compare the AI Agent's actual output with the expected answer
- Judge LLM then provides a **correctness score** and an explanation for its assessment.
- Metric calculation has been tested internally in our QA process over the past several months.

Benefits of Using LLM as a Judge:

- **Automation:** scalable approach to scoring compared to human evaluators (can cover many languages too)
- **Efficiency:** Speeds up the evaluation cycle, allowing for faster iteration and improvement of AI Agents.
- **Deeper Insights:** Explanations can offer valuable insights into why an answer was deemed correct or incorrect.

Evaluation Prompt to guide Judge LLM

```
"You are an expert evaluation system for a question answering chatbot.\n"
  "You are given the following information:\n"
  "- a user query,\n"
  "- a reference answer, and\n"
  "- a generated answer.\n"
  "Your job is to judge the relevance and correctness of the generated answer.\n"
  "Output a single score that represents a holistic evaluation.\n"
  "You must return your response in a line with only the score.\n"
  "Do not return answers in any other format.\n"
  "Follow these guidelines for scoring:\n"
  "- If the generated answer is fully correct and contains relevant information, "\n"
  "give it a score value that lies between 4 and 5.\n"
  "- If the generated answer is not fully correct, but acceptable, "\n"
  "give it a score value that lies between 2.5 and 4.\n"
  "- If the generated answer is not correct and not acceptable, "\n"
  "score it between 1 and 2.5\n"
  "Be strict with your evaluation, dont be lenient, cost of wrong claims is high. "\n"
  "The scores will be used by end user.\n"
  "## User Query\n"
  "{query}\n"
  "## Reference Answer\n"
  "{reference}\n"
  "## Generated Answer\n"
  {response}
```

Benchmark Creation Guidance

- Aim to create at least 1 scenario for each tool function or combination of tool functions that are intended to be used together.
- For complex agent-teams with agents that have several tools available, aim for 5 or more scenarios for each agent in the team.
- Aim for at least 10 questions per scenario to fully explore different parameterisations of the function calls.
- Make sure every function call is executed at least once with default parameters and with non-defaults. For complex functions this can go up to 30.
- Agents can use session history, include questions in a scenario that can be answered using history.

Question

Am I eligible for overtime pay as a salaried employee?

Expected Response

Overtime for hourly employees is typically calculated as 1.5 times the regular hourly rate for any hours worked beyond 40 in a workweek. Some states or union agreements may have additional rules. You can find your specific pay rate and hours in your latest payslip or in the payroll section of your employee portal.

?

Am I eligible for overtime pay as a salaried employee?

Overtime for hourly employees is typically calculated as 1.5 times the regular hourly rate for any hours worked beyond 40 in a workweek. Some states or union agreements may have additional rules. You can find your specific pay rate and hours in your latest payslip or in the payroll section of your employee portal.

=

?

I worked on a public holiday — does that count as overtime?

Working on a public holiday may qualify for additional holiday pay, but it doesn't automatically count as overtime unless you've exceeded 40 hours in the week. Some companies offer 'holiday premium' pay separately from overtime. Please refer to your local HR policy or union agreement for specific rules.

=

?

How is overtime calculated for hourly employees?

Overtime for hourly employees is typically calculated as 1.5 times the regular hourly rate for any hours worked beyond 40 in a workweek. Some states or union agreements may have additional rules. You can find your specific pay rate and hours in your latest payslip or in the payroll section of your employee portal.

=

?

What's the approval process for working overtime in our company?

Overtime must generally be pre-approved by your manager. You can submit an overtime request through the Time & Attendance system. Your manager will review and approve the hours before they are processed for payment. Unapproved overtime may require additional justification.

=

?

Does travel time count toward overtime hours?

Travel time may count as compensable hours depending on when and how the travel occurs. For example, if you travel during regular working hours, it usually counts. Travel outside working

1	What is Matt's current additional comp?	Matt's current additional compensation includes a Car Allowance for an SUV valued at \$1,000 USD.	Matt's current additional compensation includes a Car Allowance for an SUV valued at \$1,000 USD, which has been effective since January 1, 2010, and is still ongoing.	✔ 5	The generated answer is relevant and fully correct. It provides the same information as the reference answer and adds additional context about the duration of the compensation.
2	Is there a deadline for submitting adjustment requests this cycle?	Yes, the deadline for submitting compensation adjustment requests for this cycle is Friday, October 20, 2025. All requests must be submitted through the system by 5:00 PM local time. Late submissions may not be processed until the next compensation cycle.	Yes, there is! Please make sure to submit all compensation adjustment requests by October 20th. This ensures HR has time to review and process everything before the cycle closes.	✔ 4	The generated answer is relevant and fully correct. It provides the most important information which is the deadline date from the reference answer.
3	What was Matt's prior additional compensation?	Prior to his current car allowance, Matt's additional compensation included several performance awards and bonuses. He received quarterly performance awards of \$2,500 in July 2024 and \$1,500 in April 2025, as well as a safety award of \$500. Additionally, he was granted one-time special bonuses of \$10,000 in both 2022 and 2025, and an \$8,000 bonus in 2019.	Prior to his current car allowance, Matt's additional compensation included quarterly Performance Awards of \$2,500 USD (effective July 2024) and \$1,500 USD (effective April 2025), as well as a Safety Award of \$500 USD dating back to May 2000.	✔ 4	The generated answer is mostly relevant and correct, but it contains a mistake regarding the date of the Safety Award. The reference answer states the Safety Award was received in 2000, specifying a date, while the generated answer incorrectly mentions it as dating back to May 2000, which is inconsistent with the context of the other dates provided.
4	What additional comp did Elaine get in the past 3 years?	Over the past three years, Elaine has received a car allowance for an SUV valued at \$200 per month, ongoing since 2014. She also earned quarterly performance awards of \$1,800 in September 2024 and \$2,000 in March 2025. Additionally, Elaine received a one-time special bonus of \$7,500 in 2024.	Over the past three years, Elaine has received quarterly Performance Awards of \$1,800 USD (September 2024) and \$2,000 USD (March 2025), as well as one-time special bonuses of \$8,000 USD in 2022 and \$7,500 USD in 2024. Additionally, she has a current Car Allowance for an SUV valued at \$200 USD, which has been in place since 2014 and continues. If you'd like more details on any of these, just let me know!	✔ 5	The generated answer is mostly relevant and correct but it contains a mistake. It mentions a one-time special bonus of \$8,000 in 2022, which is not present in the reference answer. The rest of the information aligns with the reference answer.
5	What additional compensation does Ryan get?	Ryan does not currently receive any additional compensation.	Ryan Paul currently does not receive any additional compensation such as allowances, performance awards, or bonuses. If you need more details or have other questions, feel free to ask!	✔ 5	The generated answer is relevant and fully correct, providing the same information as the reference answer with additional context about the types of compensation Ryan does not receive.
6	What is the frequency of Elaine's additional compensation (e.g., quarterly, annually)?	Elaine's additional compensation includes a **Car Allowance (SUV)** of \$200 per month, which is ongoing. The frequency of this compensation is **monthly**.	Elaine's additional compensation includes a Car Allowance for an SUV valued at \$200 USD, which is ongoing and does not have a specified frequency. In addition, she receives quarterly Performance Awards, with recent awards of \$1,800 USD and \$2,000 USD. So, her additional compensation is a mix of a continuous car allowance and quarterly performance awards. If you want to know more, feel free to ask!	✔ 5	The generated answer provides additional information about Elaine's compensation, mentioning both a car allowance and quarterly performance awards. However, it incorrectly states that the car allowance does not have a specified frequency, while the reference answer specifies it as monthly. This mistake affects the accuracy of the response.
7	How long has Elaine been receiving her current form of additional compensation?	Elaine Shoudy has been receiving her current additional compensation, a car allowance for an SUV valued at \$200, since January 1, 2014. and it continues to be in effect.	Elaine has been receiving her current additional compensation, a Car Allowance for an SUV valued at \$200 USD, since January 1, 2014, and it continues to this day. Supervisor Agent

Description
The BenefitsSupervisor agent serves as the orchestrator for the Benefits Advisor experience. Upon receiving a user's inquiry (e.g., selecting the best health plan), this agent interprets the request, determines the necessary subtasks, and delegates them to specialized Worker Agents and LLM/Tool components. It coordinates the overall workflow, ensures data and responses flow between steps, and compiles the final recommendation to deliver back to the user.
