What are AI Agents?

Deliver **task automation**; Have agency

Autonomous digital workers **powered by LLMs**

Interprets user goals and **decides** how to execute them

Create **Plans**, Take **Actions** and **Call tools/APIs** as needed

Connects to enterprise systems for **business context**

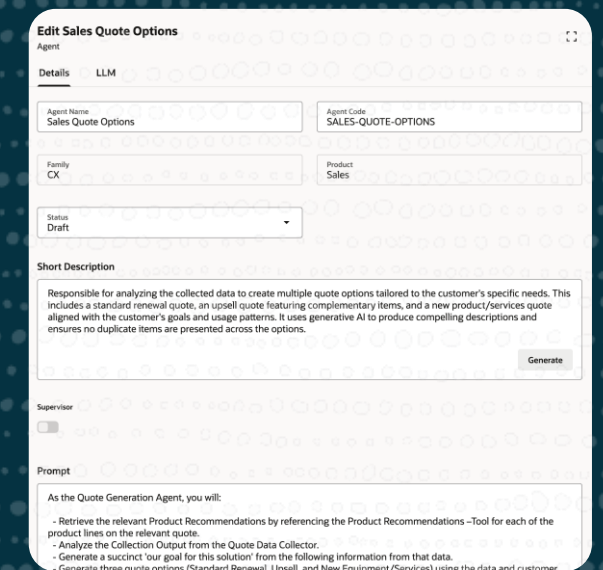

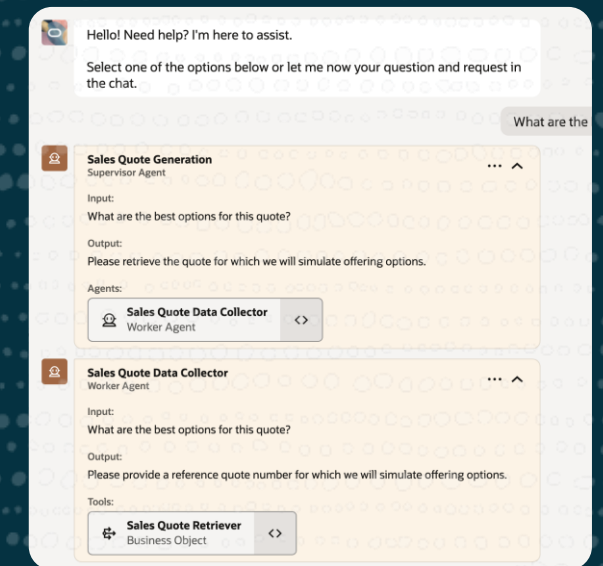

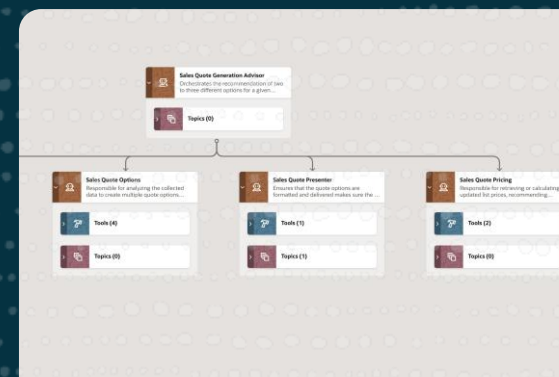

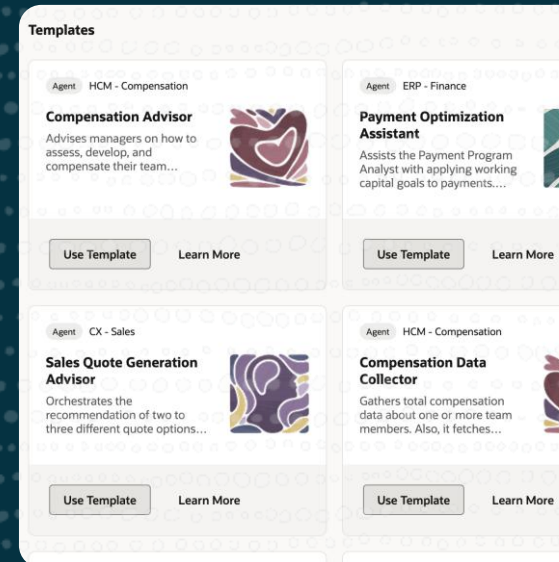

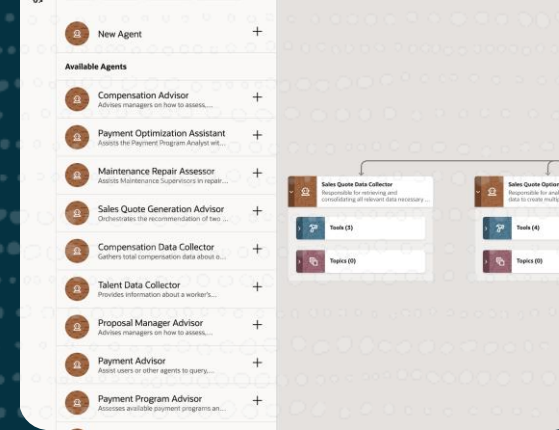

Where Agentic AI Meets Enterprise Applications

You're entering a new world where:

- **AI agents are Fusion-native** built directly into the applications that run your business
- **Business objects, roles, and workflows** are not integrated - they're native
- Security, audit, and real-time execution are part of every step

This is AI Agent Studio.

Enterprise AI, **Built in.** Not Bolted on.

Sales Quote Generator Team Template

We will now automatically configure several agentic components that are provided out of the box with this template.

If you choose to manually configure, make sure to provide unique names and

End-to-End AI Agent Solutions for Your *Entire* Enterprise

Delivering a complete set of AI Agent capabilities to drive automation & enterprise productivity

Author

Quick to deploy, in app experience, natural language embedded in the flow of work

Answer

Agents with personalized customer context for advice, guidance and decision support

Action

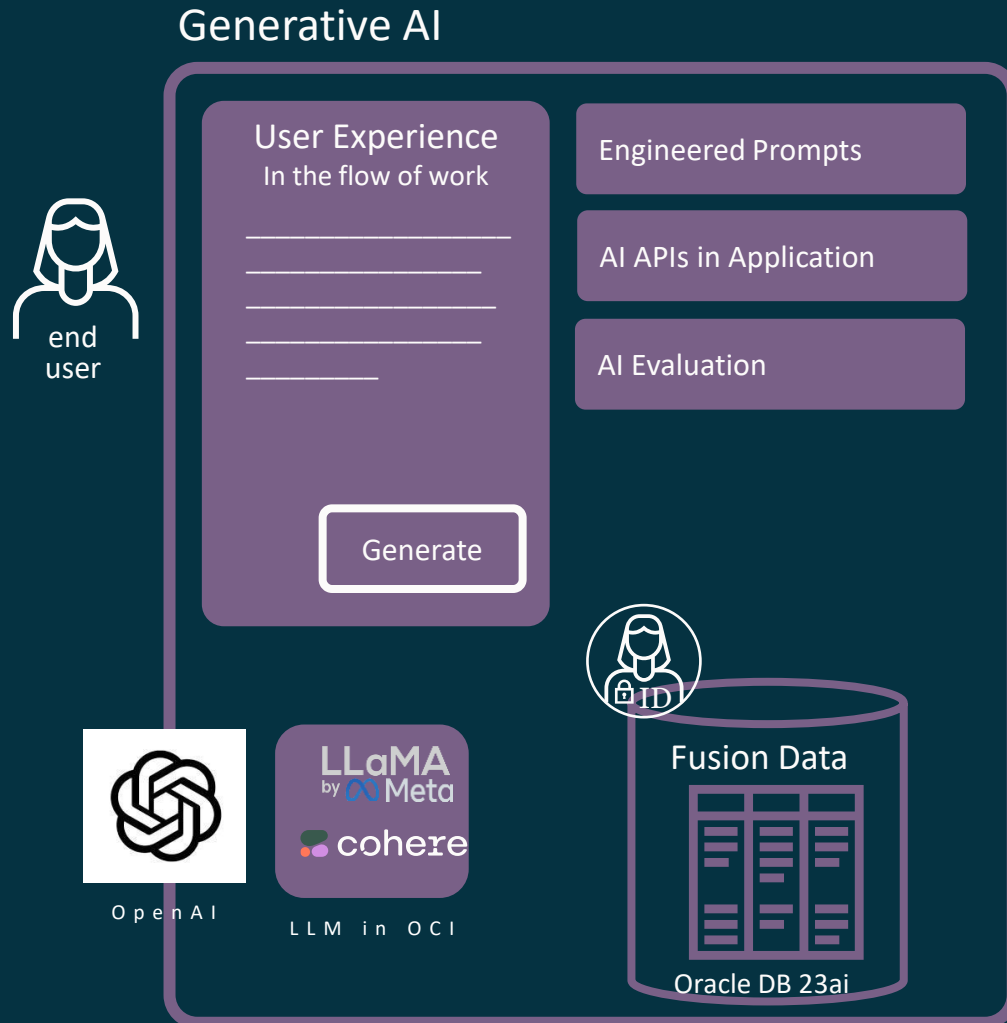

Agents and agent teams for simple to complex business workflows taking supervised actions

Shape the future of work for your teams in the Fusion AI Agent Studio, where you can dream up, design, and deploy AI Agent workflows

Assemble

AUTHOR: Embedded Intelligent Content to Enhance Productivity

- Seamlessly integrates with the existing application experience
- Streamlines routine content creation, summarization and recommendations
- Generates text in context of the business and user
- Matches response tone to audience and compliance requirements
- Aids and accelerates task completion with in-process automation

Quick-to-deploy agents that craft summaries or generate text

Human Resources

Job postings

Create engaging job posting descriptions that clearly convey a position's requirements and success criteria.

Goal setting

Suggest descriptions for individual and team goals to foster greater alignment, productivity, and collaboration.

Peer recognition

Compose recognition notes to acknowledge an employee's success in a style matching your company culture.

Performance feedback

Draft feedback comments to help improve employee performance and engagement.

Help desk knowledgebase

Construct knowledgebase articles to answer frequently asked questions with less time and effort.

Employee growth recommendations

Give each employee AI-recommended growth and learning opportunities that automatically adapt to changes in their role and the business.

Service, Sales, and Marketing

Email, Landing page, Subject line, SMS, PUSH authoring assistants

Quickly create personalized emails and landing pages, subject lines, SMS messages, and push notifications for better engagement

Email Response, Appointment Agenda, Meeting Notes authoring assistants

Automatically summarize meetings and emails, extract key points, synthesize next steps, and generate action items

Service Request, Chat, and Phone summarization

Generate concise chat and phone transcript summaries, ensuring seamless customer interactions and agent transitions

Knowledge and Interview authoring assistants

Automate the creation of new knowledge base content for live agents to review and edit prior to posting

Appointment agenda authoring from email

Automatically generates meeting agendas from emails, saving time and helping to make every meeting structured and productive.

Supply Chain, Finance, and Procurement

Supplier negotiation synopsis

Generates a short synopsis of a negotiation tailored to specific negotiation for a personalized and professional touch

Repair suggestions

Generate repair suggestions and summarize past service and recommend actions using the asset or similar assets service history

Shift summaries

Provide a concise summary of shift highlights and key points that need attention to facilitate a smooth transition between shifts

Inspection instructions

Compose instructions that guide an inspection to fast-track creation of an inspection plan

Sales order acknowledgement

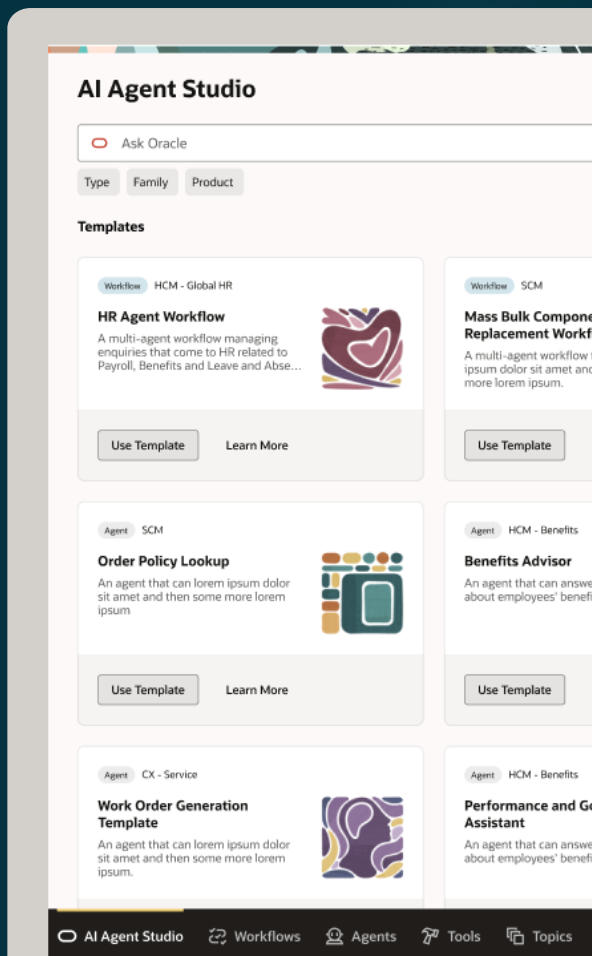

Draft an order confirmation email including any order for prompt customer communication

Pricing promotions

Summarize the promotional items and generate rich, accurate and engaging promotion description enabling increased productivity and standardization

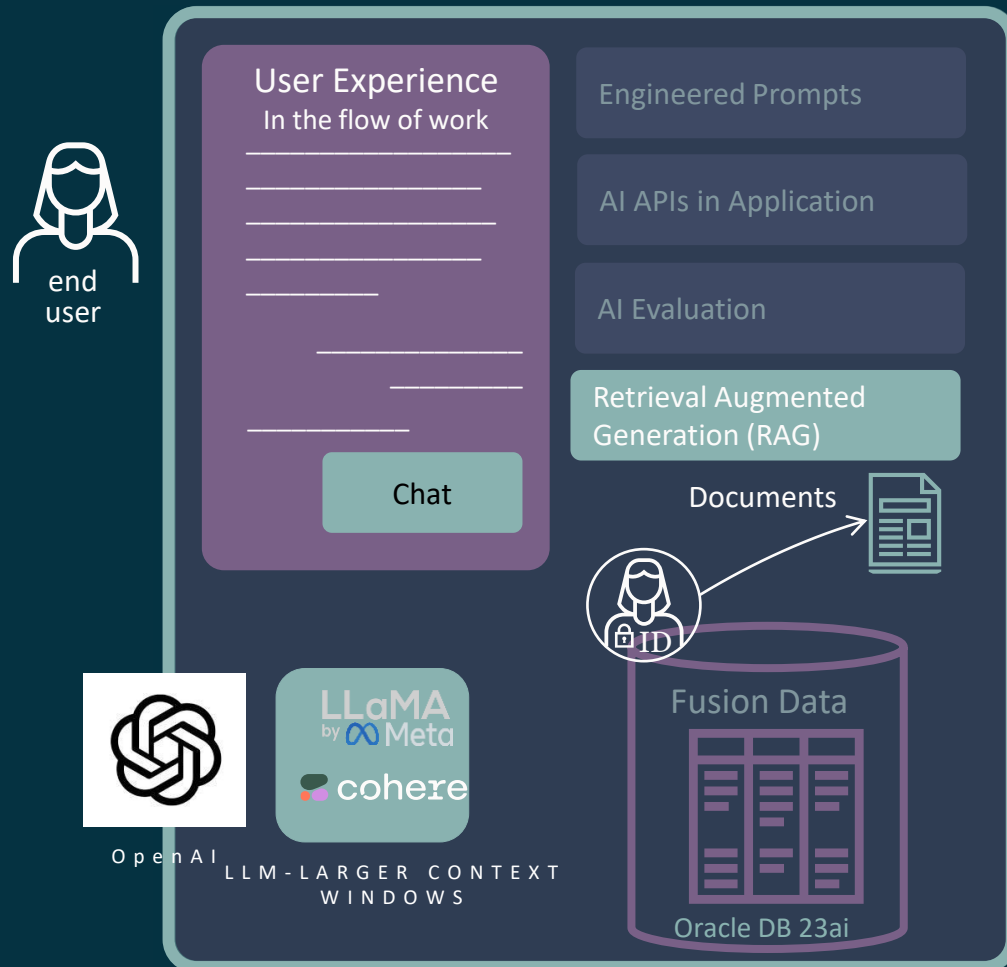

Narrative reporting

Assemble and produce insightful, data-rich financial, management, and regulatory reports in a secure and collaborative process

ANSWER: Contextual Guidance to Automate Knowledge-Heavy Tasks

Fusion AI Agents

- Provides responses from knowledge documents via chat interaction with business context
- Empowers users with answers grounded in the documents provided with citations
- Accelerates business execution by providing actionable in-context guidance throughout the system

Get accurate, up-to-date guidance and answers to questions

Human Resources

Internal Mobility Agent

Helps assist employees in navigating career advancement opportunities within the organization, providing guidance on open positions and required skills.

Benefits Agent

Helps employees understand and maximize their benefits packages, offering personalized insights on medical, dental, and vision coverage, based on individual needs

Job Seeker Agent

Helps aid job seekers in preparing for and finding employment, offering resume tips, interview coaching, and job search strategies

Payslip Agent

Clarifies details on payslips, helping employees understand their salary breakdown, deductions, and compensation benefits

Leave and Absence Agent

Helps employees navigate leave and absence policies with an understanding of their time off rights and benefits relevant to individual circumstances

Collective Agreements Agent

Assists employees in understanding collective bargaining agreements and their implications for employment terms

Service, Sales, and Marketing

Account Agent

Q&A agent experience for account teams to research all related documents to better understand the current state of the account

Product Agent

Q&A agent experience for sellers to research products and related details to help ensure they're positioning the appropriate products and providing accurate details to the customers

Self-service Chat

Resolves common inquiries like troubleshooting, order tracking, and returns without human intervention

Knowledge Search Agent

Empower service and field service agents by providing quick, contextually relevant answers from the knowledge base

Customer Chat Agent

Supports contact center agents who engage customers via chat and improves response accuracy and speed by surfacing relevant knowledge and guiding agents in real-time

Incentive Compensation Plan Agent

Translates complex compensation structures into clear, understandable language, helping sales reps grasp earning potential, align with business goals, and stay motivated

Supply Chain, Finance, and Procurement

Material Handling Agent

Ensure compliance with safety standards, proper equipment use, and accurate goods routing to enhance worker safety with improved efficiency and customer satisfaction.

Outbound Compliance Agent

Provide guidelines for shipping agents to ensure compliance with hazardous material placard regulations ensuring they meet regulatory requirements for size, quantity, and placement

Goods Delivery Agent

Provide detailed delivery instructions and restrictions to warehouse operators, specifying prohibited delivery hours and designated locations to ensure deliveries are efficient, compliant, and directed

Claims Agent

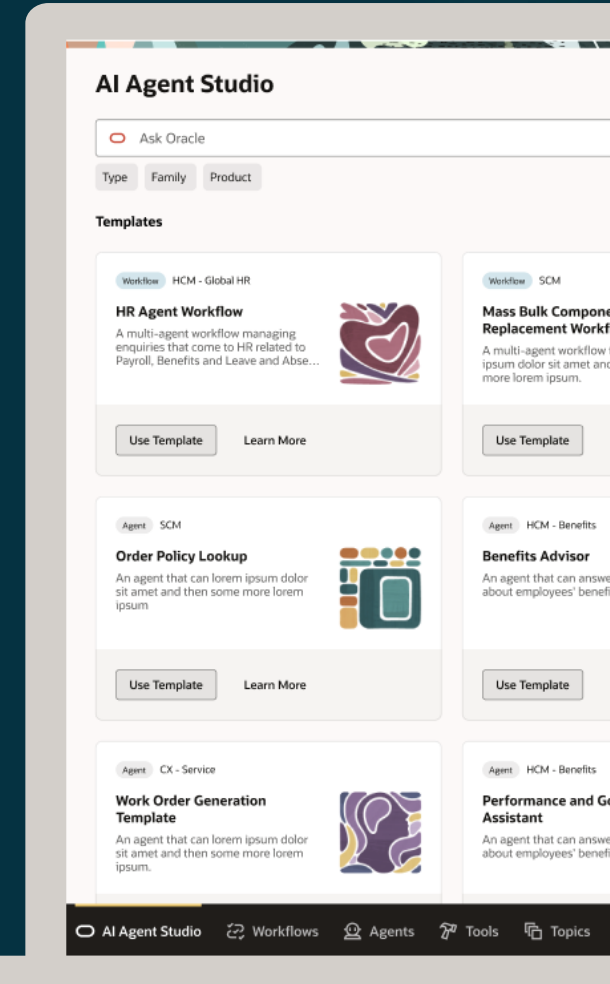

Help claims analysts quickly identify non-compliant claims and provides guidance on proper handling to ensure deductions are justified and processed correctly

Supply Chain Collaboration Policy Agent

Provide guidance on forecast collaboration rules, including commit horizons, penalties, and resolution procedures, ensuring compliance and alignment

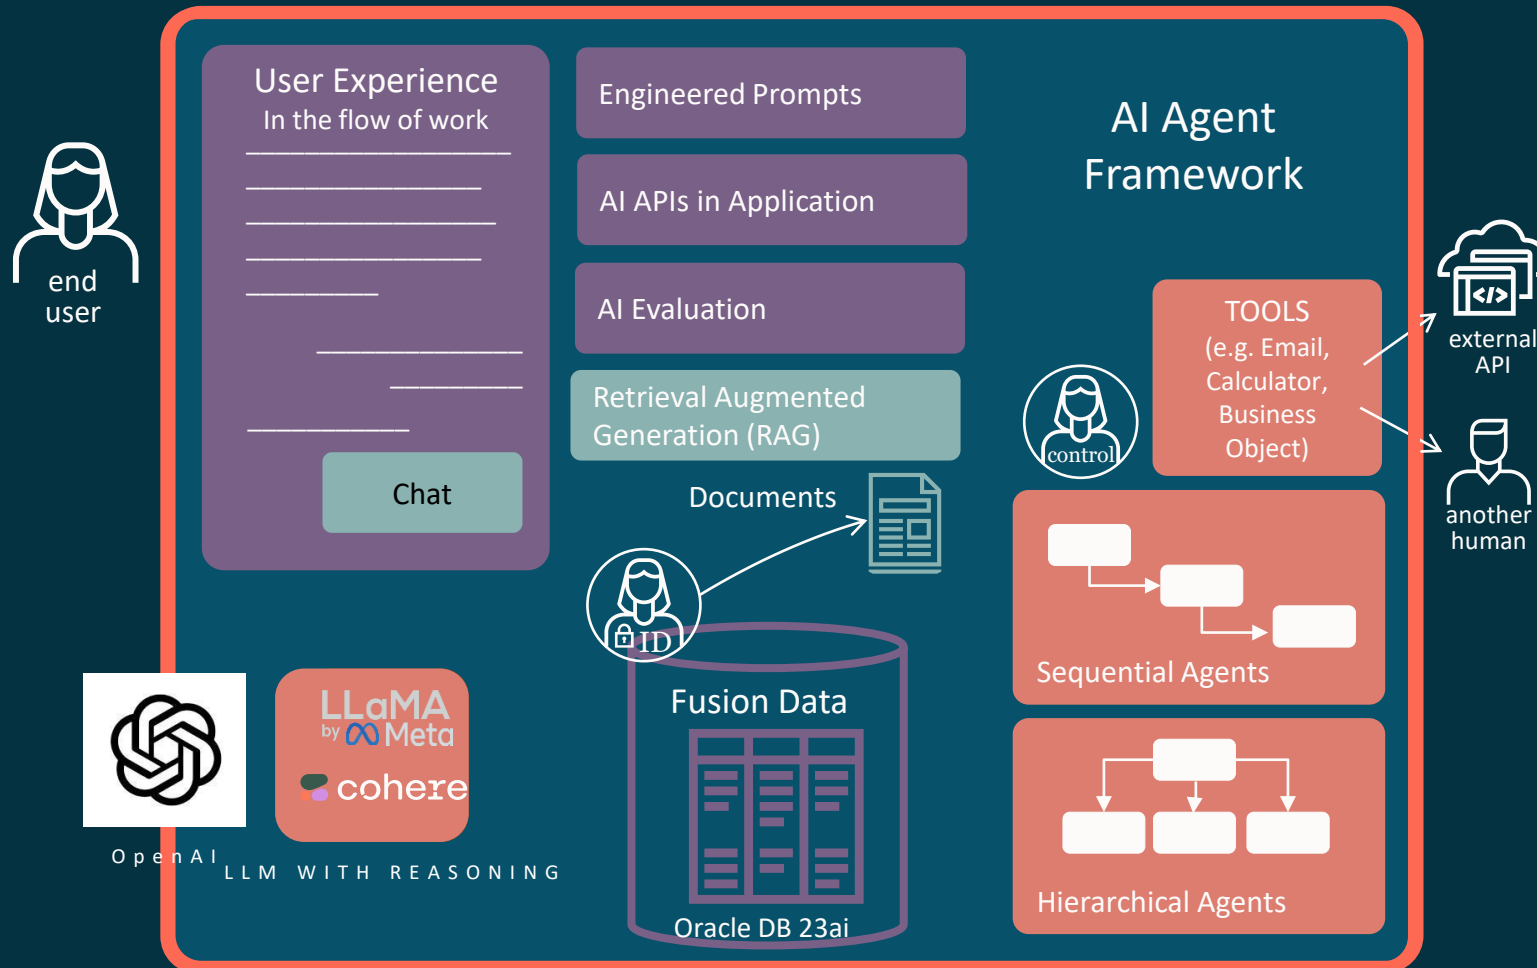

Product Regulations and Compliance Agent

Help Design Engineer validate compliance with regulatory standards while ensuring accuracy of item data and eliminating manual interpretation of complex regulatory documents

ACTION: Intelligent, Enterprise-Deployable, Autonomous AI Agents

Fusion AI Agents

- Automates workflows and collaborates within Agent Teams to optimize end-to-end business processes
- Executes single & multi-step tasks, handling parallel and sequential operations
- Learns from past interactions for a seamless, adaptive experience
- Uses tools like calculators, knowledge stores, calendar, and APIs to drive actionable outcomes
- Plans and optimizes actions using a reasoning-capable LLM
- Executes and refines tasks dynamically for continuous improvement

Solve problems with AI agents that can plan and orchestrate tool usage

Human Resources

Career Planning Agent

Helps employees create actionable career progression plans and goals based on an individual's employee profile

Compensation Agent

Helps managers make salary decisions for their teams based on market trends, benchmarks, peer compensation data, and company policies

Shift Scheduling Agent

Assists in the creation and management of employee shift schedules, accommodating individual preferences while validating optimal coverage and compliance with regulations

Personal and Employment Details Agent

Helps employees keep their profiles up-to-date and access information on employment milestones, such as promotions, transfers, and relocations

New Hire Onboarding Agent

An onboarding assistant that can help support new employees through their initial days, offering information on company policies, culture, and essential resources

Talent Review Agent

Aids in the talent review process, offering tools and insights to assist managers in evaluating employee performance and potential

Service, Sales, and Marketing

Service Request Resolution Agent

Reduce agent workload and contact center handling time by providing AI-recommended resolution steps and automatically surfacing relevant knowledge articles for incoming service requests

SR Triage Agent

Improve time-to-resolution and minimize service-center efficiency by categorizing and assessing incoming SR's according to product and service taxonomies, enabling appropriate routing based on all the relevant criteria

Work Order Creation Agent

Accelerates field service workflow by auto-filling work order details. Based on existing information, the agent will create a draft Work Order for the human agent to review and complete

Account engagement Agent

Summarizes key insights across business functions to help sales teams identify upsell and renewal opportunities, uncover stakeholders, and generate sales activity overviews, enabling a stronger focus on relationship-building and revenue growth

Opportunity-to-quote Agent

Automates document generation, suggests optimized discounts, and provides real-time account insights, enabling sales teams to create proposals efficiently within their existing tools

Supply Chain, Finance, and Procurement

Return Order Agent

Collect order data, validate return request against policies, provide best return options, create return orders, send summary response to customer for faster order processing

Maintenance Repair Delegation

Analyze images for damage assessments, provide repair options and cost estimate, recommend technician skills and provide summary for expedited maintenance

Mass Component Replacement

Analyze replacement component for compliance, provide part recommendations, a comparison summary, perform change impact analysis, create engineering change order minimizing cost and quality impact

Inventory Shortages

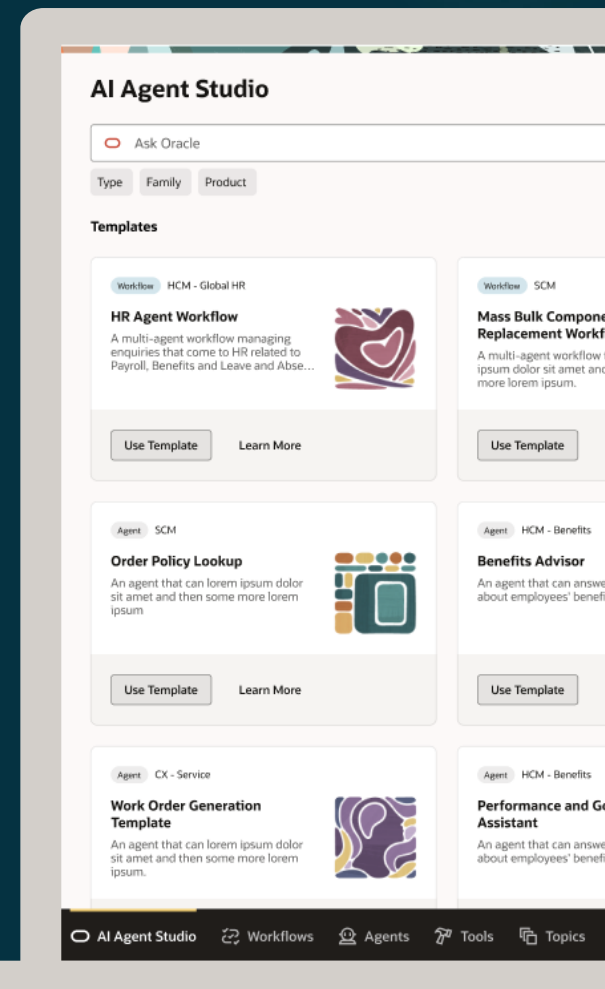

Identify stockouts, suggest replenishment options, perform impact analysis, evaluate stocking levels and generate a summary minimizing shortage and stockout conditions

Price Change Request

Import pricing requests, transform request data into actionable pricing changes, analyze for compliance, route draft changes, notify requestors to reduce manual errors and improving consistency of pricing

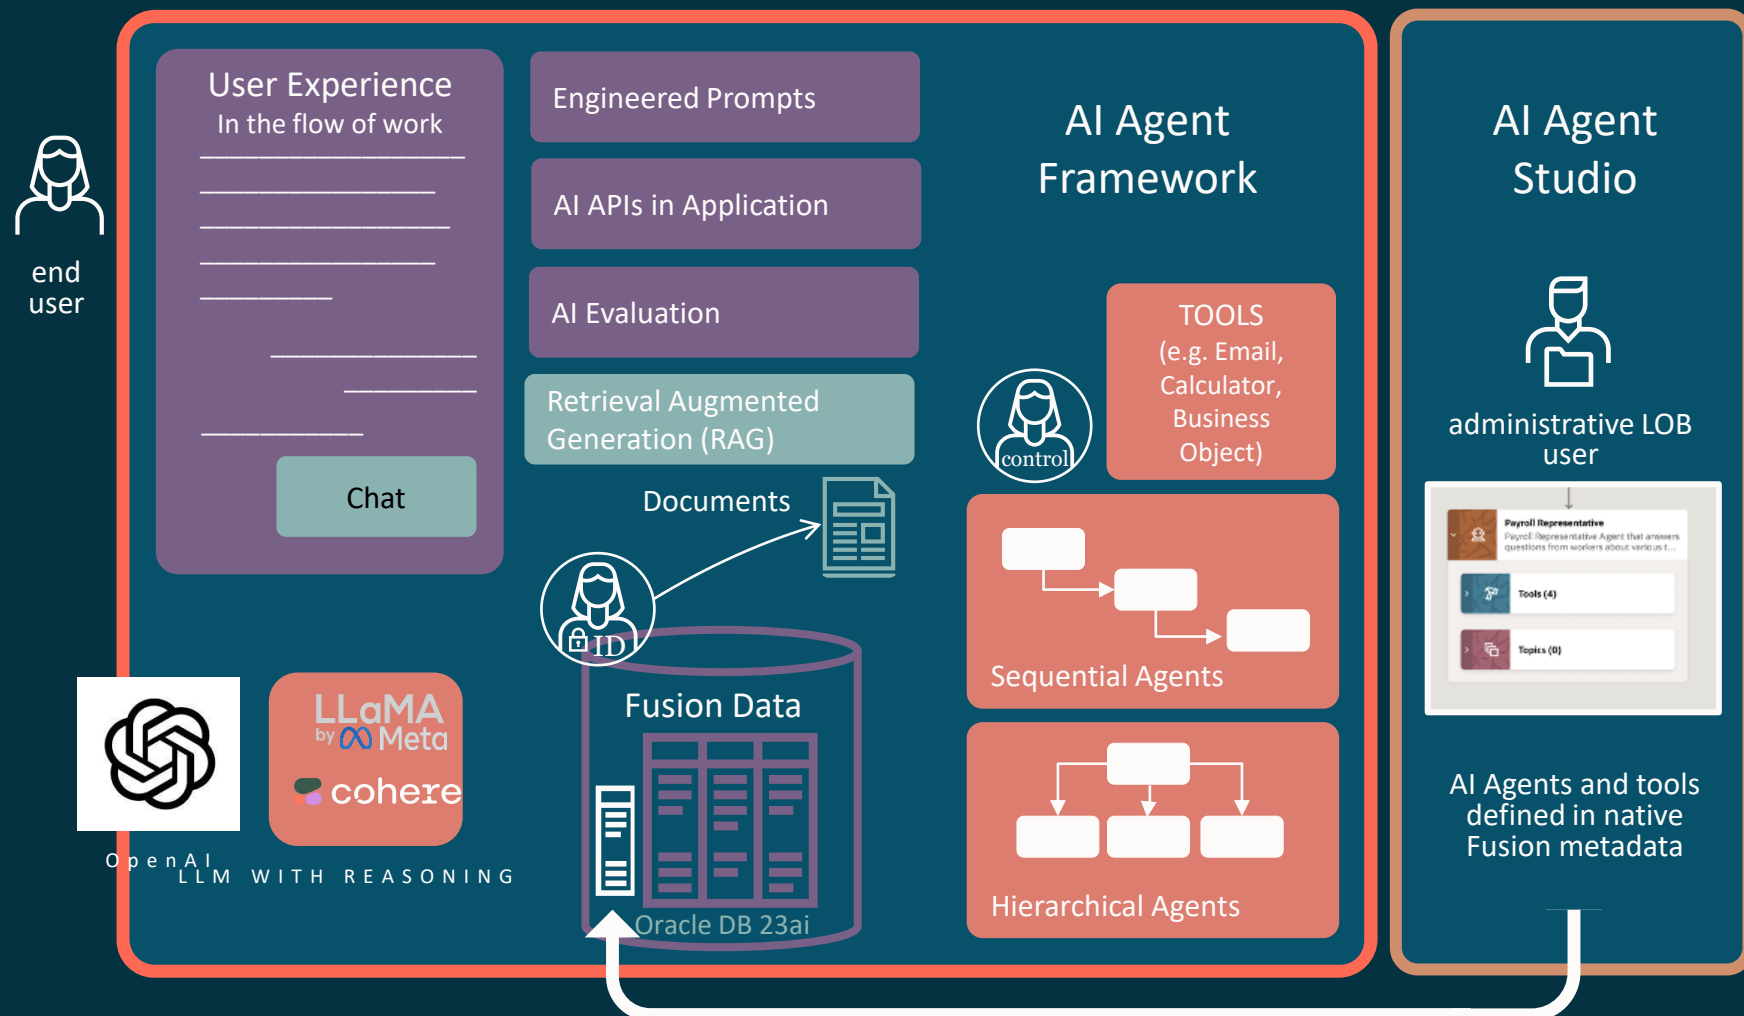

Exceptions Manager

Identify exceptions, categorize by severity and type, provide corrective actions, and automatically executes resolution steps, improving supervisor productivity and reducing cost of poor quality

ASSEMBLE: Customize, Extend Agents in Agent Studio

Fusion AI Agents

- AI Agent Builder for Fusion Applications
- Rapid AI Agent Creation, Deployment, and Management
- Customize and Extend with Prebuilt Templates
- Seamless Fusion Integration, Security, and Governance
- Connect to External Data Sources and Agent Frameworks

Key Concepts

 AI Agent Studio

 Agent Teams

 Agents

 Tools

 Topics

Agent Teams/Workflows – A structured sequence of steps or actions that the AI Agent follows to accomplish a specific business task or answer a user query. In Agent Studio, Workflows are the core design artifacts that outline how the Agent behaves for each use case — combining conversation logic, system integration, and user support flow in one place. It defines how the agent behaves for a particular use case — what to do, when to do it, and how to respond based on user inputs or backend system data. Think of it like a playbook or blueprint for the agent, guiding it through:

- User interactions (what questions to ask, what information to collect)
- Backend operations (what data to fetch, what systems to interact with)
- Decision points (how to handle different paths based on user input or system results)
- Responses (how to reply clearly and helpfully)

Key Concepts

 AI Agent Studio

 Agent Teams

 Agents

 Tools

 Topics

Agents/Worker - This configures Agents to handle specific tasks, specifying the capabilities and behaviors of each AI assistant Agent.

- **Task-Specific Behavior:** It configures the agent to handle particular types of tasks, such as retrieving data, processing information, or executing actions based on user input.
- **Capacities and Skills:** The agent is equipped with specific functionalities that enable it to carry out tasks such as accessing databases, interacting with APIs, or offering suggestions.
- **Worker:** This is often seen as the "worker" behind the scenes. It performs the actual action or task that the Agent is supposed to deliver to the user. It can be a separate entity responsible for tasks like fetching data, processing information, or executing actions in the backend systems.
- **Integration:** Workers can connect to other systems, APIs, or tools, which allow the agent to access and utilize information from different data sources or business functions.

Key Concepts

Tools - Connect agents to backend systems and functionalities. Tools refer to the integrations or components that provide AI Agents with the capability to interact with external systems, APIs, or databases to perform specific tasks or retrieve data as part of their workflows. Tools enhance the agent's functionality by allowing it to access backend systems, execute actions, and perform advanced operations beyond basic conversational tasks.

- **Integration with External Systems:** Tools connect the AI agent to various backend systems or third-party services to fetch or manipulate data.
- **API Interaction:** Many tools serve as API connectors, enabling the agent to interact with external APIs (e.g., querying a database, interacting with a CRM, or sending an email).
- **Performing Actions:** Tools enable the agent to take actions based on the user's requests, such as creating records, sending notifications, or executing business logic in backend systems.
- **Enhancing Agent Capabilities:** Tools expand the AI agent's abilities, making it more versatile in handling complex workflows and responding dynamically to user inputs.

Key Concepts

 AI Agent Studio

 Agent Teams

 Agents

 Tools

 Topics

Topics - A Topic refers to a specific subject or area of conversation that an AI agent is designed to handle. It's essentially the core content or focus of the interactions between the user and the agent. Each Topic allows the AI agent to understand and respond appropriately to user queries related to that subject, ensuring that the agent provides accurate and relevant information or services. A Topic defines the subject of the conversation, while Workflow, Agent/Worker, and Tools detail how the conversation is managed, tasks are executed, and external data is accessed.

- **Subject Area:** Focuses on a specific domain or subject (e.g., payroll, benefits, IT support).
- **Intent Recognition:** Helps the agent identify user intent based on queries to determine which Topic is relevant.
- **Conversation Flow:** Defines how the agent interacts with the user, including the responses and actions it provides.
- **Tool/System Integrations:** Relates to the systems or tools the Topic integrates with to fetch data or perform actions (e.g., HR systems, databases).
- **Contextual Responses:** Provides contextually appropriate responses based on the user's request, considering the overall conversation.

Oracle AI Agent Studio

Create AI Agents with the same tools that Oracle uses.

Oracle AI Agent Studio for Fusion Applications

Design workflows and agents to fit your needs

Deploy and extend with prebuilt templates

The screenshot displays the Oracle AI Agent Studio interface. At the top, there's a navigation bar with the 'INSPIRE' logo and search, home, and user icons. Below the navigation bar, the main heading is 'AI Agent Studio'. A search bar labeled 'Ask Oracle' is present, along with filters for 'Type', 'Family', and 'Product'. The main content area is divided into two sections: 'Templates' and 'Recommendations'.

Templates: This section displays a grid of prebuilt agent templates. Each template card includes a title, a brief description, and a 'Use Template' button. The templates shown are:

- Procurement Policy Advisor:** Provides seamless access to procurement policies enabling employees to ask questions wh... (Agent - SCM - Procurement)
- Sales Quote Generation:** Orchestrates the recommendation of two to three different options for a given... (Team - CX - Sales)
- Career Planning Guide:** Helps employees create actionable career progression plans. For example, the agent c... (Team - HCM - Career Development)
- Insights Advisor:** Monitors for user specified business criteria and conditions and generates payment insight... (Agent - ERP - Accounts Payable)

- Benefits Advisor:** Helps employees understand and maximize their benefits packages, offering personalize... (Agent - HCM - Benefits)
- HR Agent:** Manages inquiries that come to HR related to Payroll, Benefits and Leave and Absences. (Team - HCM - Global HR)
- Personal and Employment Details Assistant:** Helps employees keep their profiles up-to-date and access information on employment... (Agent - HCM - Global HR)
- Compensation Advisor:** Advises managers on how to assess, develop, and compensate their Teammembers. It uses... (Team - HCM - Compensation)

Recommendations: This section features a 'Create AI Agents' banner with the text: 'AI Agents can use a variety of tools, topics and 3rd party integrations to work on the use cases you define.' It includes a 'Create Agent' button and a 'Learn More' link.

Recently created: This section lists recently created agents and teams:

- Multi Agent HR Agent Team:** A multi-agent team managing inquiries that come to HR related to Payroll, Benefits and Leave and Absences.
- Single Agent Absence Advisor Agent:** An agent that can answer questions about employees' absence balances.
- Single Agent Suggest SR Resolution Agent:** Create an agent that can suggest SR resolutions for specific situations.

The bottom navigation bar includes links to 'AI Agent Studio', 'Teams', 'Agents', 'Tools', 'Topics', 'Prompts', 'Credentials', and 'Monitoring'.

Create custom agents and multi-agent teams

Seamless Integration with Fusion Applications

- AI Agents natively access Fusion Business Objects, APIs, and rules without requiring customization.
- Fusion Business Objects provide structured data for AI Agents to execute tasks accurately, such as invoices, orders, inventory levels, employee records, and customer data.
- Control which business objects and fields AI Agents can access, providing data governance.
- AI Agents respect native Fusion security and role-based access controls, enabling enterprise data protection and privacy.

Working with System Prompts and Topics

Define and customize Agents and Agent Teams instructions

Each Agent has a system prompt

The system prompt defines the Agents persona and capabilities. It establishes the tools it can access. It also describes how the Agent should think about achieving any goals or tasks for which it was designed.

Topics define the scope, intent and purpose of an Agent

Topics further refine an Agent's scope and purpose – this is added to the system prompt in instructing an LLM.

Customize System Prompts and Topics in Templates

System Prompts and Topics within Templates are pre-defined by Oracle for the use case. Customize those instructions with the prompt or topic directly or create new Topics to augment those instructions.

System Prompts can be optimized for different LLMs

Different models react differently to instruction formats and languages. Replace or customize System Prompts and Topics for specific models to get the best performance on that model

LD EMP AGENT

Worker Agent

Prompt

You are a helpful assistant that will answer questions about a worker's personal and employment details. Limit responses strictly to personal and employment details related topics, ensuring accurate and relevant information. Never generate facts. All answers should rely on tool call response.

To answer requests from managers to update employment data, follow these instructions

- Use the "Add Assignment" tool to add an assignment to a worker's employment record
- Use the "Change Assignment" tool to change a worker's assignment
- Use the "Change Location" tool to change a worker's location
- Use the "Change Manager" tool to change a worker's manager
- Use the "Change Working Hours" tool to change a worker's working hours
- Use the "Local and Global Transfer" tool to process local and global transfers for a worker
- Use the "Manage User Account" tool to change a worker's user account
- Use the "Promote" tool to promote a worker
- Use the "Promote and Change Position" tool to promote a worker and change the worker's position
- Use the "Terminate Employment" tool to terminate a worker
- Use the "Transfer" tool to transfer a worker

If the user asks questions that do not belong to the above topic

- Politely decline to answer the question
- Emphasize to the user the scope of topics you are able to address

IMPORTANT:

when you generate tool calls JSON, ensure producing valid JSON and don't miss any curly braces at the end.

Use the My Team tool to:

- Search for a worker by name within the manager's hierarchy.
- Scope the search to either 'Direct Reports' or 'All Reports'.
- Retrieve the worker's Assignment ID and Person ID.

Then, use the Public Workers tool with the Person ID and Assignment ID to:

- Fetch the worker's assignment information.
- Fetch the worker's email.
- Fetch the worker's work phone.
- Fetch the worker's HR Representatives.

When required to call multiple tools, call each tool sequentially and not do nested calls.

If there are more than one person answer this question for each of the person.

Output TERMINATE when you gave the final answer on user's query.

Cancel

Building Multi-Agent Teams for Complex Tasks

- Assemble single or multi-agent teams to handle complex, multi-step tasks and broader business processes.
- Easily configure and refine agent teams using the studio's intuitive interface, leveraging templates or building from scratch.
- Orchestrate agent teams with pre-configured workflows that enable seamless coordination, data sharing, and decision-making.

Tips & Tricks for Multi-Agents

When designing Multi-Agent configurations, organizing your agents and assigning appropriate tools to worker agents is crucial for creating efficient, maintainable Agentic workflows.

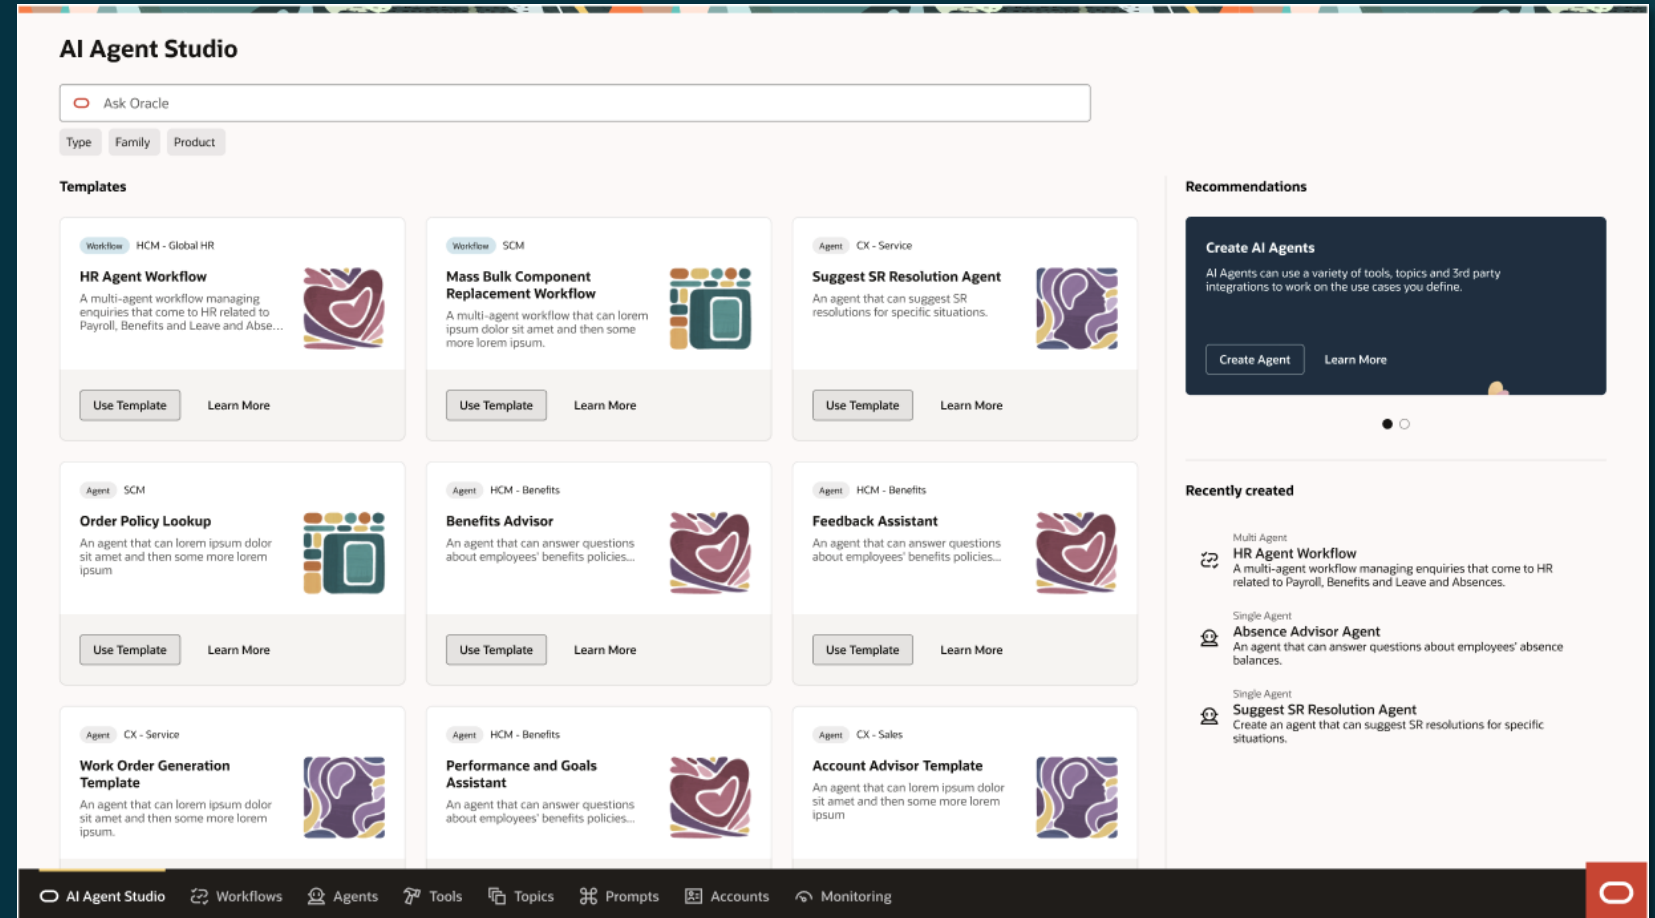

- Supervisor Agent
 - Interprets user intent
 - Routes to appropriate worker agent
 - Orchestrate conversations
 - Manage worker agents
- Worker Agent
 - Specific tasks or domains

Agent Partitioning

- Domain-based: Divide worker agents based on business domains. e.g, Recruit, Talent, Learning, etc.
- Function-based: Divide worker agents for specific functions and task. e.g., payslip related, personal information related, skills related, etc.
- Why Agent Partitioning is important:
 - Focused Expertise: Specialized in a specific area of the product, like HCM.
 - Better Accuracy: Can provide more accurate and helpful responses
 - Tool Management: Tools can be then logically grouped
 - Escalation Paths: There can be a clear handoff protocol between AI agents or to the human agents.

Pre-Configured Templates for Fast Deployment

- Quickly configure, deploy, and extend Oracle-delivered agents using a catalog of pre-built templates and a guided assembly process.
- Create custom agents and multi-agent teams from scratch with the full suite of studio components.
- Design single-agent workflows or multi-step agent teams, tailored to fit your specific needs.

Deep Dive into Tools

Business Object Tool

Walkthrough

Create connections to Fusion data with a Business Object Tool

Retrieve Fusion data with ease

Access Fusion business object

Reference any Fusion Business Object via its OpenAPI spec by providing the BO endpoint and configuring the request/response

Setup parameters and headers using the Business Object documentation

Use the Business Object documentation to add required header and query parameters for the LLM to slot the contextual values

Prune the response fields list

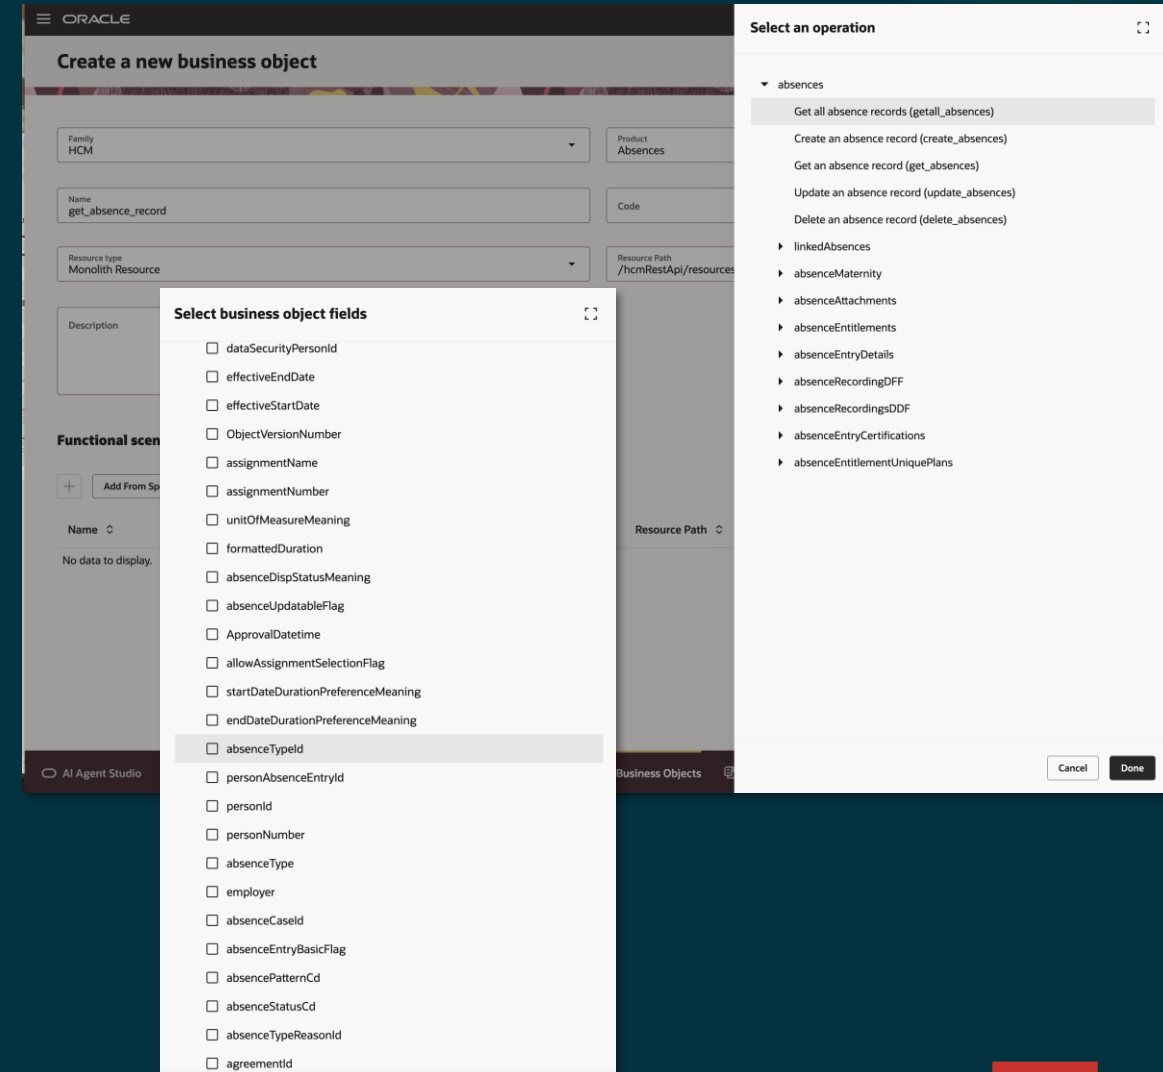

Select which fields will be returned from the GET request to focus the response for the use case

Supports Custom Objects and Custom Fields

Publish a new custom object and/or custom fields and the OpenAPI spec is updated so you can create a Business Object tool with those custom attributes

Data security stays intact

All Business Object tool requests use the Fusion user token of the logged in user, ensuring data integrity

Take Actions on Fusion Business Objects

Call POST/PATCH/DELETE endpoints

Perform transactional actions on a business object

Create a functional scenario for an action by selecting a POST/PATCH/DELETE function from the OpenAPI spec

Setup parameters, headers, and body using the Business Object doc

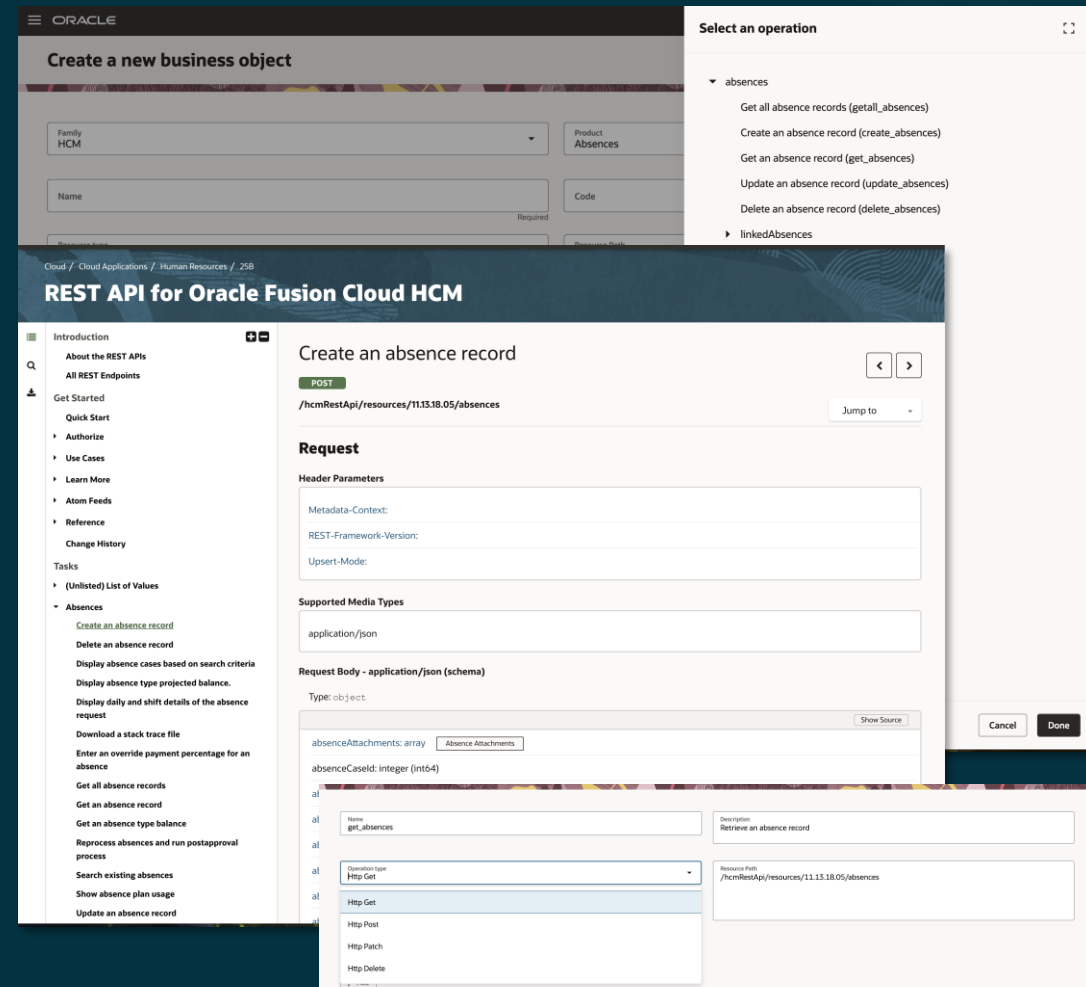

Use the Business Object documentation to add required header and query parameters and the body for the LLM to slot the contextual values

Data security stays intact

All Business Object tool requests use the Fusion user token of the logged in user, ensuring data integrity

Human in the Loop

Ensure a human will review and approve a transactional action by the agent

Document Tool

Walkthrough

Document Tool enables retrieving context from unstructured text

Agents can perform semantic search on documents

Easily upload a set of documents

Upload local documents to be associated with a Document Tool

Embedded vectors live in the Fusion 23ai customer databases

Documents are processed (parsed, chunked, embedded) into the Oracle 23ai vector database within the customer tenant

Semantic search grounds the response to a specific chunk of text

An Agent performs a semantic search for documents related to its task or goal and uses the unstructured text from the documents to “ground” the answer

End user can view document references

The end user is shown the references used for each answer to validate the information from the documents if desired

Oracle 10k Cancel Create

External REST Tool

—
Walkthrough

External REST Tool

Define a REST Connection using an endpoint

Provide a specific REST endpoint to create a connection

Setup the Resource Path, HTTP/S operation, and parameters for each Function exposed within the tool

Setup parameters

Define slottable parameters for headers, query parameters and body for each Function

Show sample queries to the LLM

Give examples of the query so the LLM can properly slot parameters for that call

Test the Functions from within AI Agent Studio

Test each Function, by creating example parameters at design time, to ensure it is properly defined and works from within the Oracle environment

Create the External REST Tool and provide to an Agent to execute the REST call

Describe the capabilities of the tool along with the Functions definitions to enable the Agents to execute those calls as needed

Get Local Weather [Cancel] [Create]

Tool Type: External REST

Tool Name: Get Local Weather

Code: GET_LOCAL_WEATHER

Family: SCM

Product: Order Management

Description: This tool can check the local weather by a latitude/longitude point.

Require Human Approval: ☐ Enable if you want human approval before running the tool

Functions | Authorization

+ Add

Name	Operation	Description
	GET	Provide a latitude, longitude point to get the weather at that location

Resource Path: https://api.weather.gov/points/

Parameters | **Sample Queries**

+ Add

Query	Description
https://api.weather.gov/points/39.7456,-97.0892	Sample query that needs a latitude, longitude pair to provide weather for that locations

External REST Tool Authentication

Connect to a wide variety of External REST Services

Access several authentication methods

From Basic Auth to OAuth2.0 and Fusion User Assertion, all your connectivity needs are available.

Utilizes the same technology used by Visual Builder for Redwood customer extensions

Oracle's TRAP (Token Relay And Proxy) technology that powers this capability is the same used when extending Redwood Apps

Basic

Fixed username and password

OAuth2.0 User Assertion

Logged in user identity represented by OAuth token for custom scope

OAuth2.0 Resource Owner Password Credentials

OAuth token obtained with fixed client id, secret, username and password

OAuth2.0 Client Credentials

OAuth token obtained with fixed client id and secret

Oracle Cloud Infrastructure API Signature 1.0

Authentication

None

Deep Link Tool

Walkthrough

Create a Deep Link tool to send users to a Fusion form

- Send the user to the correct Fusion form with context
Provide the form’s relative URL and parameter definition to send the user to the correct form with the proper context
- Provide the definition and description for each parameter
Well described parameters enable the LLM to slot those values with the correct user context
- Customize the message to the user for the deep link
Give the user the context for the deep link suggestion with a custom message.

Human in the Loop

Walkthrough

Human-in-the-Loop

- Easily add human review steps at any point in the process for oversight and control.
- Require human approvals before executing key actions, such as sending an email or updating a record.
- Inject human intervention between AI Agents, enabling collaboration and validation within multi-agent workflows.
- Balance automation with human oversight, providing flexibility for compliance, accuracy, and business policies.

The screenshot displays the AI Studio interface for a 'Benefits Analyst' agent. The left sidebar shows a list of tools available to the agent, including 'Public Workers', 'Benefits Enrollments', 'Salaries', 'Notify Benefits Representative', 'Self Service Enrollments', 'Fetch Benefits Enrollments', 'Benefits Policies', 'Search Payroll Policies', 'Search Leave and Absence Policies', and 'Calculator'. The main area shows the configuration for the 'Notify Benefits Representative' tool, which is an 'Email Tool'.

 - HR Helpdesk Supervisor:** Supervisor Agent
 - Payroll Representative:** Worker Agent
- Rule:** Agent requires approval to access Business Object tool.
- Available actions:** Approve, Reject
- Output:** In order to access that information, I need your approval:
- Tools:**
 - Fetch Payslip:** Business Object Tool
- Final Output:** In order to access that information, I need your approval:
- Final Actions:** Approve, Reject

When to use which Tool?

Tool Type	Purpose	Capabilities	Common Use Cases	Example
Business Objects	Interacts with core business data and operations	•Performs CRUD operations (GET, POST, PUT, PATCH) •Supports complex queries with multiple parameters •Handles both fixed queries and dynamic parameters	•Retrieving employee/user details •Fetching account information •Managing payroll data •Accessing worker assignments	getAccountDetails tool that retrieves account information with support for filtering by organization name, party number, etc.
Deep Links	Generates navigation links to specific application pages	•Creates parameterized URLs •Supports context-aware navigation •Can include user-specific parameters	•Directing users to view payslips •Linking to account management pages •Providing shortcuts to specific workflows	viewPaySlip tool that generates a link to view an employee's payslip using their PersonId
Email	Handles automated email communications	•Sends system notifications •Uses predefined alert codes •Supports templated messages	•Sending payroll notifications •Alerting about account changes •Notifying representatives	notifyPayrollRepresentative tool that sends notifications using predefined alert codes
Document/ RAG	Manages document-based operations and queries	•Searches through document repositories •Answers questions using document content •Supports RAG (Retrieval-Augmented Generation)	•Searching policy documents •Answering FAQs from documentation •Retrieving knowledge base articles	getRAGAnswer tool that answers payslip-related questions using company policy documents
External REST	Integrates with external systems and services	•Makes HTTP requests to external endpoints •Handles authentication and headers •Supports various HTTP methods	•Integrating with third-party services •Accessing external APIs •Cross-system data retrieval	getWorkersUsingExternalTool that fetches worker information from an external system
Calculator	Performs numerical computations and calculations	•Executes mathematical expressions •Handles business calculations •Supports various data types (numbers, booleans)	•Computing leave balances •Calculating tax amounts •Processing financial figures	Calculating prorated salary or leave balance based on employment duration

Testing and Deploying

Walkthrough

Testing and Deploying

- Test Agents and Agent Teams at design time to ensure they function correctly before deployment.
- Refine and optimize AI outputs based on test results to improve accuracy and effectiveness.
- Confidently publish AI Agents after validation to ensure high-quality, trusted responses in production.

The screenshot displays the 'HR Agent Workflow' interface, specifically the 'Supervisor Workflow' section. The top bar indicates the workflow is in 'Draft' status, with 'Cancel' and 'Update' buttons. The last saved time is 01/30/2025 09:30 AM. The main workspace shows a hierarchical structure of agents:

- HR Help Desk Supervisor** (Supervisor agent tasked with managing inquiries that come to the Human Res...)
 - Tools (0)
 - Topics (0)
- Leave and Absence Representative** (You are an experienced Leave and Absences Representative that answers...)
 - Tools (1)
 - Topics (0)
- Benefits Representative** (Benefits Representative Agent that answers questions from workers about...)
 - Tools (0)
 - Topics (0)

On the right, a detailed summary of deductions for the month is shown:

HR Help Desk Supervisor
Supervisor Agent

Here is a summary of your deductions for this month:

- Pretax Deductions:**
 - Dental Pretax: \$28
 - Medical Pretax: \$237.50
 - Pretax 401k: \$771.42
 - Vision Pretax: \$17.50
 - Total Pretax Deductions: \$1,054.42**
- Tax Deductions:**
 - FIT Withheld: \$939.89
 - Medicare Employee Withheld: \$89.11
 - SIT Withheld (CA): \$373.50
 - Social Security Employee Withheld: \$381.03
 - VPDI Employee Withheld (CA): \$3.07
 - Total Employee Tax Deductions: \$1,786.60**
- Voluntary Deductions:**
 - Legal Post Tax: \$11
 - Total Voluntary Deductions: \$11**

These deductions are subtracted from your gross earnings to determine your net pay.

At the bottom, there is a text input field labeled 'Enter message' and a 'Send' button.

Monitoring & Evaluation

Capabilities

- **Centralized Dashboard:** Aggregated Prompt & Agent activity overview; powerful filtering (Family, Product, time).
- **Comprehensive Metrics:**
 - **Performance:** Median/P99 Latency, Error Rate.
 - **Cost:** Token counts (Total, Input, Output, Median/P99).
 - **Usage:** LLM Requests, Turns, Users.
 - **Quality (Evals):** Median Correctness
 - **Safety (Prompts):** Prompt Injection/Content Safety Flags.
- **Detailed List Views:** Sortable/filterable Prompt & Agent lists; customizable metric columns.
- **Execution History Drill-Down:** Investigate individual Prompt executions, Agent sessions, and turn-by-turn details.
- **Navigate to Tracing:** Seamlessly access detailed trace views from history.

Agent Tracing

Capabilities

- **Detailed Visualization:**
 - **Agent Tracing:** Step-by-step timeline of multi-step Agent executions (sequence, duration, status).
 - **Prompt Tracing:** Clear view of single Prompt execution details.
- **Granular Metadata & Metrics:** Inputs, outputs, model parameters, guardrail actions (prompts), performance (latency, errors), cost (tokens), safety & quality (evals) scores per turn/run.
- **Interactive:** Clickable Agent timeline steps for details; overall Agent execution summaries.
- **Tool Details:** Information on invoked tools (type, inputs, outputs, functions).
- **Context Information:** Username, start time, Agent memory (evals), prompt, topics & instructions
